ABSTRACT

BMC AMI OPS

BMC AMI Ops Automation 8: Controlling Dependents Across IPL with TOM (WBT)

Learning Path >

Course Code: AOAU-TMCD-F804

Modality	Duration	Applicable Versions	Target Audience
Web-based Training (WBT)	30 mins	BMC AMI Ops Automation 8.4	• Operators • Administrators • System Programmers

Course Overview

BMC AMI Ops Automation (BMC AMI OpsA) product is part of the BMC AMI Ops Automation for Data Centers solution. This product provides tools and applications to improve an operator's ability to maintain high system availability and to support the operator through error minimization, improved productivity, and problem determination and prevention.

This course provides the essential knowledge required to work with Total Object Manager (TOM), which provides basic infrastructure for managing a variety of objects in a z/OS sysplex environment.

The course will help learners apply the correct TOM recovery and restart commands after a STOP timeout to restore parent OBJECTs and strong dependents to active status.

In addition to English, the textual content of this course is available in Chinese (Simplified), French, German, Italian, Japanese, Korean, Portuguese (Brazil), and Spanish (Mexico).

Prerequisites

- NA

Recommended Trainings

- NA

Learning Objectives

- Understand how TOM handles dependent children across IPL when stopping a parent OBJECT with lock and block actions.
- Distinguish between locking and blocking strong dependent children and their effect on next-IPL restart behavior.
- Apply the correct recovery actions after a STOP timeout, including reset or reset op status.
- Return strong dependents and the parent OBJECT to active status.

Course Modules

- Applying recovery actions after a STOP timeout
  - STOP Timeout Return Codes
  - Using Reset and Reset op Status
  - Choosing the Correct Recovery Action
- Returning Dependents and the Parent OBJECT to Active Status
  - Using Start Unlockdeps
  - Using Start Unblockdeps
  - Confirming Active Status Transitions
