Course Overview

BMC AMI Storage comprises of a set of solutions to simplify complex mainframe storage environments, monitor, analyze and optimize performance of storage resources. These solutions help improve the performance of infrastructure as well as the management of mainframe storage environment.

This course provides an overview on different solutions, like BMC AMI Storage Automation, BMC AMI Storage Allocation, BMC AMI Storage Reporting, and BMC AMI Storage StopX37/II. This course will help database administrators understand the components involved in BMC AMI Storage architecture, the started tasks and subcomponents required for AMI Storage solution as well as an understanding of the members of parameter library that define a BMC AMI Storage subsystem.

Note: BMC AMI Storage was formerly known as MainView Storage Resource Manager (SRM™)
