Course Overview

BMC AMI Storage IAM is a high-performance indexed access method for z/OS® that can be used in place of VSAM KSDS or VSAM ESDS datasets for batch, TSO, and online processing.

IAM offers support functions for tuning, alternate indexing, reporting, analyzing data, journal recovery and restoring, and monitoring storage.

This web-based course helps learners understand the guidelines to perform tuning and real-time tuning for buffering, define and build an IAM Alternate Index dataset and path, and generate IAMPRINT and IAMINFO reports. The course also provides information on using the IAMSMPVS report for data analysis and using the journal recovery and restore programs for recovering and restoring data.
