Subscription Overview

BMC AMI DevX Total Test (formerly known as BMC Compuware Topaz for Total Test) is an automated testing solution that enables developers and testers to test mainframe programs and subprograms almost immediately after updating a piece of code. Developers need to test programs frequently and repeatedly to verify their changes while remaining independent from the environment. BMC AMI DevX Total Test enables automated virtualized and non-virtualized testing by allowing virtualization of the environments and external data sources.

Using examples, demonstrations, and lab work, the content of the online education subscription provides an overview of BMC AMI DevX Total Test and details the use of this solution for automated testing.

Note: This content is part of an annual subscription and is regularly updated and changed, without notice, based on product updates, improvements, and additions. During the duration of the subscription, users will have access to the latest content without incurring additional fees or being subject to additional registrations.

IMPORTANT: The BMC Certified Associate: BMC AMI DevX Total Test examination is included in this subscription. Taking the exam and pursuing certification is optional. You will have one attempt to pass the exam. Retakes according to the [BMC Certification Policy](#) are available for an additional fee. Those who pass will receive the title of BMC Certified Associate: BMC AMI DevX Total Test.
