Everyone is in the cloud for something...

Public Cloud Users are Confused About Who Owns Their Cloud Security

- Over half of organizations (mistakenly) think their cloud provider owns all or the majority of the responsibility for their data security
- 21% of organizations (mistakenly) believe they equally share responsibility for their cloud data security with their cloud provider
- Only 15% of organizations believe they are wholly or primarily responsible for their public cloud data security
- Only 40% of organizations are highly confident they could prevent loss or leakage of sensitive cloud data

Public Clouds are not Secure by Default

- Nearly all organizations report having IT or security workloads in the cloud
- Nearly half of organizations believe they have data leakage due to unauthorized access occurring often to very often
- Over half of organizations (mistakenly) think their cloud provider owns all or the majority of the responsibility for their data security

Cloud Users Must Take Ownership of Protecting Their Cloud Data!

- 79% of organizations admit they need to invest in stronger security controls for cloud data
- 35% of organizations have funded a project to invest in stronger controls

Top Challenges for Cloud Security

1. Lack of security visibility within the cloud infrastructure due to provider limitations - 73% of Enterprises
2. Lack of security visibility within the cloud infrastructure due to tool limitations - 63% of Banks/Insurance
3. Lack of centralized controls for distributed cloud providers - 75% of Manufacturing
